1 Summary

1.1 Valuation Schedule (Fiscal Year 2018)

The August 2018 Participation Report incorporates the results of an updated valuation (as at June 30, 2018) – the impact of the implementation of the valuation is discussed in section 1.2. The table immediately below summarizes the implemented valuations for fiscal year 2018.

	FARM FISCAL YEAR 2018 – SCHEDULE OF VALUATIONS								
Valuation Date	Discount Rate (per annum)	Participation Report	Description of Changes						
Sep. 30, 2017 (completed)	1.81% mfad: 25 bp	Oct. 2017	updated valuation (roll forward): all jurisdictions; allowed claims expense ultimates updated; cash flow projections updated; discount rate updated; no changes to selected margins for adverse deviations (interest rate or claims development).						
Dec. 31, 2017 (completed)	1.79% mfad: 25 bp	Mar. 2018	updated valuation: all jurisdictions; cash flow projections updated; discount rate updated; no changes to selected margins for adverse deviations (interest rate or claims development).						
Mar. 31, 2018 (completed)	1.95% mfad: 25 bp	May 2018	updated valuation (roll forward): all jurisdictions; cash flow projections updated; discount rate updated; no changes to selected margins for adverse deviations (interest rate or claims development).						
Jun. 30, 2018 (completed)	1.88% mfad: 25 bp	Aug. 2018	updated valuation: all jurisdictions; allowed claims expense ultimates updated; cash flow projections updated; discount rate updated; margins for adverse claims development updated (no change to mfad for interest rate).						
Sep. 30, 2018		Oct. 2018	update valuation (roll forward):						

Under the proposed schedule for fiscal year 2018, the "off-half" valuation quarters ending March 31, 2018 and September 30, 2018 would not reflect a full valuation update of assumptions, but would rather "roll-forward" key assumptions from the previous valuation. As well, all valuations are proposed to include all jurisdictions and business segments (private passenger and non-private passenger).

1.2 New Valuation

A valuation of the Facility Association Residual Market ("FARM") as at June 30, 2018 has been completed for Private Passenger and non-Private Passenger business segments and all jurisdictions since last month's Participation Report. The valuation was completed by the Facility Association's internal actuarial group in conjunction with, and approved by, the Appointed Actuary, under the

hybrid model for actuarial services. Additional detail will be provided in an "Actuarial Highlights – Quarterly Valuation" report as at June 30, 2018, which will be posted to the FA website later in the fall.

The valuation implementation impact on the month's results is summarized in the tables below. As indicated in the "TOTAL" row, column [6] of the table on the left, the incorporation of the new valuation had an estimated \$3.8 million favourable impact on the month's net result from operations, subtracting an estimated 2.9 points (column [6] of table on right) from the year-to-date Combined Operating Ratio to end at 81.6%.

Summary of Impact of Implementing Result of Valuation as at June 30, 2018¹

Grand Total	unfav / (fav)						ytd EP	133,246	(actual)			
	IMPACT in \$000s from changes in:							IMPACT unfav / (fav) as % ytd EP from changes in:

TOTAL	(4,126)	1,450	(2,676)	630	(1,800)	(3,846)	(3.1%)	1.1%	(2.0%)	0.5%	(1.4%)	(2.9%)

The valuation results and associated implementation impacts are discussed in more detail in the next two sections.

1.2.a Valuation Results

The key results of the valuation by jurisdiction and business segment are summarized in the table at the top of the next page (**for nominal indemnity only**), indicating an overall **favourable prior accident year** change of \$5.3 million (2.0% of the associated unpaid claims liabilities selected at March 31, 2018), and changes in the selected accident year **2018** nominal **indemnity ratios** projected to have an aggregate <u>unfavourable change</u> of \$0.0 million at December 31, 2018 (i.e. this latter estimate is in relation to estimated full year earned premium and represents a 0.0 point deterioration in the overall 2018 accident year nominal indemnity loss ratio as projected at year-end across all jurisdictions and both business segments – non-zero changes occur at the jurisdiction and business segment level).

¹In these tables, "PAYs" refers to prior accident years, "CAY" refers to the current accident year, and "Prem Def" refers to the provision for premium deficiency or the deferred policy acquisition asset (as applicable). "Nominal" refers to changes excluding any actuarial present value adjustments, whereas "apv adj." refers to actuarial present value adjustments.

The columns under the heading "ults & payout patterns" reflect the impact of changes in the valuation selected ultimates and claims payment patterns (i.e. based on unchanged selection of discount rates and margins for adverse deviation). The column "dsct rate" reflects the impact of the change in the selected discount rate and the column "margins" reflects the impact of any changes in selected margins for adverse deviations.

otal	263,282	(5,330)	(2.0%)	56.5%	0.0%	(15)	55.0%	(0.9%)	(1,948

In the above table, the columns [1] through [3] highlight the changes in prior accident years' results. Changes to the 2018 accident year indemnity loss ratios are summarized in columns [4] through [6]. Finally, columns [7] through [9] summarize the changes in the 2019 indemnity loss ratios.

The valuation process continues to rely on three main actuarial methodologies – the expected loss ratio method, the loss development method², and the Bornhuetter-Ferguson method³. The valuation triangles are split by business segment (i.e. private passenger⁴ and non-private passenger), following Member Sharing as per the Plan of Operation. The valuation triangles are directly reconcilable to accident year / calendar year results for the FARM.

In general, the valuation data triangles are used directly in striking development factor selections by coverage for each jurisdiction and each business segment. However, where the data is not deemed credible or is deemed too volatile or for other considerations, development factors may be struck

²Also referred to as the chain ladder method or link ratio method.

³Three additional methodologies (Mack, Murphy, and ICRFS Cape Cod) are included as part of the valuation process but are currently only considered for references purposes only.

⁴As per the Plan of Operation, the residual market business (i.e. not part of a Risk Sharing Pool or Uninsured Automobile Fund) is segmented into "private passenger non-fleet" and "all other". For convenience, the former is referred to as "private passenger".

using data from another jurisdiction (for example, using Alberta factors for the northern territories), or from industry data (via the loss development triangle data available from the General Insurance Statistical Agency ("GISA") through the Insurance Bureau of Canada ("IBC")).

Final selection of IBNR was made at the coverage/accident-half year level, after consideration of the results of the three methods identified above. This is consistent with the process followed for the prior FARM valuation.

1.2.b Valuation Implementation

The implementation impact associated with this latest valuation is summarized in Table A below (total impact is favourable by \$3.8 million, or 0.9% of the \$448.0 million total member statement policy liabilities as posted in the previous month's Participation Reports). The valuation focused separately on nominal results for indemnity (see column [1]) and the allowed claims adjustment expenses for excess legal and for specific professional fees ratios (see column [3]). As the retroactive adjustments for Servicing Carrier claims fees are derived directly from accident year indemnity ratios to earned premium, these adjustments were updated to reflect the valuation results as well (see column [2]). Changes in nominal values will generate changes in actuarial present value adjustments, even if the discount rate and/or margins for adverse deviation are not changed. This valuation also saw changes to the selected discount rate (but no change to the selected investment rate margin), and changes to the claims development margins at the jurisdiction / business segment / coverage / accident half-year level. The total changes in actuarial present value adjustments with the valuation implementation are shown in column [5].

Implementation Summary Table A (\$000s)

Implementation Impac	t - relative to p	ojection for m	onth of Augus	t 2018 (neg	gative values a	re favourable)
\$000s	indemnity	retroactive claims fee	allowed claims expenses	nominal total	actuarial present value	Grand Total
	[1]	[2]	[3]	[4]	[5]	[6]
prior accident years (1994-2017)	(4,946)	(221)	753	(4,414)	178	(4,236)
current accident year claims incurred	30	32	65	127	146	273
premium deficiency / (DPAC)	161			161	(44)	117
TOTAL	(4,755)	(189)	818	(4,126)	280	(3,846)

The "nominal" impacts (total in column [4] of the table above) reflect changes in the selected ultimate loss ratio (i.e. for each accident year, it is the product of life-to-date earned premium for the accident year and the change in the selected ultimate loss ratio for indemnity and for the allowed claims expenses for the claims liabilities; ultimate loss ratios are also taken into account in determining the premium liabilities). Changes in selected nominal ultimate indemnity for the most recent five prior accident years will generate changes to the retroactive claims fees adjustments to Servicing Carriers (see column [2] of the table above). The selected ultimate ratio levels for allowed claims expenses ("excess legal") are reviewed annually with the June 30 valuation and were therefore updated with this valuation (see column [3] of the table above).

In addition to the changes in the actuarial present value adjustments directly related to the changes in selected nominal values, indemnity payment emergence patterns were updated and cash flows were

reviewed against the selected risk-free yield curve. The selected risk-free yield curve was derived from Government of Canada benchmark bond yields monthly series using values for June 2018 (the selected yield curve is anchored with the valuation date).

"Implementation Summary Table B" below summarizes, by jurisdiction, the information shown in Table A (previous page). In relating the two tables, the total for Table A column [4] matches the total for Table B column [17], the total for Table A column [5] matches the sum of the total for Table B columns [18] and [19] and [20], and the total for Table A column [6] matches the total for Table B column [21].

Implementation Summary Table B⁵ (\$000s)

Total	(4,126)	1,450	630	(1,800)	(3,846)

The impact of the valuation on a **nominal basis** (that is, prior to actuarial present value adjustments),

⁵Column [17] reflects the impact of changes in the valuation selected ultimates and column [18] reflects the impact of changes in claims payment patterns (i.e. updated valuation selected ultimates with APVs based on unchanged selection of discount rates and margins for adverse deviation). Column [19] reflects the impact of the change in the selected discount rate and column [20] reflects the impact of any changes in selected margins for adverse deviations.

is presented in Table A column [4] and Table B column [17], indicating a **total favourable** impact of **\$4.1 million**.

With respect to the actuarial present value adjustments <u>prior to</u> updating the discount rate and margins, projected indemnity payment cash flows were updated for all jurisdictions and business segments, using claim payment activity as at June 30, 2018 and ultimate selections from the latest applicable valuations – these changes contributed an estimated <u>unfavourable impact</u> of \$1.5 million (see Table B, column [18]). It is unusual for the valuation impact of actuarial present value adjustments prior to updating the discount rate and margins to be in a different "direction" to nominal changes – typically, the impact is aligned with the nominal impact and also in magnitude that reflects the weighted average of the margins. In this case, however, the <u>unfavourable impact</u> for the actuarial present value adjustments prior to updating the discount and margins reflects relatively significant changes in selected payment patterns with this valuation, particularly with respect to Ontario private passenger and Alberta non-private passenger, as can be seen by comparing the values in column [17] and [18] by row.

Based on updated risk-free yield rates and the updated projected cash flows, the **selected discount** rate was <u>decreased</u> by 7 basis points from 1.95% to 1.88%, resulting in an estimated <u>unfavourable impact</u> of \$0.6 million (see Table B, column [19]). The \$0.6 million claims liability indemnity only impact (not shown in the previous tables) associated with the discount rate change is in line with the \$0.6 million change one would estimate through interpolation using last month's sensitivity table (see section 6, Exhibit "F" for examples of sensitivity to discount rate selection).

Finally, the **selected margin for investment return** was **left unchanged** at 25 basis points, but the **margins selected for claims development** at the coverage / accident half-year level were **updated** with this valuation, hence generating an estimated **favourable impact** of **\$1.8 million** (see Table B, column [20]).

"Implementation Summary Table C" (immediately below) summarizes the valuation impact relative to year-to-date earned premium.

Implementation Summary Table C (\$000s)

Finally, an updated projection to year-end with the new valuation assumptions is presented in "Implementation Summary Table D" (at the top of the next page), allowing comparison to the full year projection included with the 2018 Final Outlook that was posted on November 10, 2017.

Implementation Summary Table D (\$000s)

(negative operating results are <u>unfavourable</u>)

Operating Result

	Outlook Po	Outlook Posted November 10, 2017			Updated Year-end Projection			Change due to Valuation	
\$000s	Earned Premium	Operating Result	COR	Earned Premium	Operating Result	COR	Month of August	Year-end 2018	
Ontario	44,378	4,583	89.8%	64,879	21,273	67.5%	3,610	4,028	
Alberta	55,194	6,965	87.5%	63,575	11,626	81.9%	(261)	(282)	
Newfoundland & Labrador	30,025	(3,626)	112.2%	28,662	3,405	88.3%	468	594	
New Brunswick	21,336	1,212	94.5%	21,662	(3,548)	116.5%	(1,534)	(1,902)	
Nova Scotia	18,432	(722)	104.0%	20,213	(1,066)	105.4%	(272)	(314)	
Prince Edward Island	4,470	582	87.0%	4,432	(977)	122.3%	413	432	
Yukon	1,884	187	90.3%	1,843	613	67.1%	255	239	
Northwest Territories	4,453	910	79.6%	4,419	1,822	59.0%	1,018	1,025	
Nunavut	1,175	324	72.6%	975	628	36.0%	149	140	
TOTAL	181,347	10,414	94.4%	210,661	33,774	84.2%	3,846	3,960	

In total, the operating result projection to year-end has <u>increased</u> by \$23.4 million from the Outlook posted November 10, 2017 (to \$33.8 million as shown in the table above). This amount is \$4.0 million higher than it would have been, if not for the implementation of the June 30, 2018 valuation. (The changes before the impact of the June 30, 2018 valuation are attributable to mix of business and other projection assumptions outside of the valuation process, as well as the previous valuations (2017 Q3 & Q4, and 2018 Q1) implemented since the 2017 Q2 valuation was used as the basis for the 2018 Final Outlook.)

One important change relative to the 2018 Final Outlook has been the increase in the discount rate (the interest rate margin for adverse deviation remained consistent at 25 basis points). Had the 2018 Final Outlook discount rate of 1.27% still been applicable, the operating result would have been *lower* by \$5.8 million (using the current interest rate sensitivity table). That is, the projected Operating Result would have been approximately \$28.0 million (COR of 88.4%) had the discount rate remained at the 2018 final Outlook level.

1.3 Appointed Actuary and Hybrid Actuarial Services Model

Liam McFarlane of Ernst & Young LLP is Facility Association's Appointed Actuary (effective as of June 1, 2013).

Facility Association operates under a "hybrid" model in relation to the management and provision of actuarial services. Under this model, actuarial services are performed by both Facility Association's internal staff and its external actuarial consulting firm. The hybrid model approach maximizes the efficiency of resource allocation while providing access to additional expertise and capacity as needed.

1.4 Consideration of Recent Legal Decisions and Changes in Legislation / Regulation⁶

There have been no changes in these descriptions since last month's Highlights, other than an update to reflect that an estimate of the impact of the May 2018 minor injury regulation reforms in Alberta has been taken into account for the latest valuation, that we do not believe the Saadati judgment will

⁶How bills become laws in Ontario is described in detail in the publication: http://www.ontla.on.ca/lao/en/media/laointernet/pdf/bills-and-lawmaking-background-documents/how-bills-become-law-en.pdf.

have a further impact on our valuation results, and updates to reflect the date of the most recent valuation and references to the Actuarial Highlights – Quarterly Valuation report.

Consideration and assessment of potential impacts of legal decisions and changes in legislation / regulation constitutes a regular part of the valuation process. Descriptions of some of the more recent changes are provided below. Please note that with the **most recent** valuation (June 30, 2018), the impact of recent Ontario Court of Appeal decisions in relation to the application of changes to the prejudgement interest rate on general damages for non-pecuniary loss (further discussed in section 1.6) was reviewed and a nominal valuation adjustment was included impacting accident years 2014 and prior, further discussion will be provided in the "Actuarial Highlights – Quarterly Valuation" report as at June 30, 2018, which is to be posted to the FA website later in the fall.

Ontario Bill 15 (Fighting Fraud and Reducing Automobile Insurance Rates Act, 2014) was introduced into the Legislature by the Minister of Finance on July 15, 2014 and received Royal Assent on November 20, 2014. Bill 15 includes various amendments and provisions such as moving the Ontario Automobile Dispute Resolution System (DRS) for statutory accident benefits from the Financial Services Commission of Ontario to the Ministry of the Attorney General (Licence Appeal Tribunal), regulation of the Tow and Storage Industry (amendments to the Consumer Protection Act and Repair and Storage Liens Act), regulations related to licensing of insurance agents and adjusters, changes to the applicable interest rate applied to overdue payments in the Statutory Accident Benefits Schedule (SABS), and changes to the prejudgment interest rate on general damages for non-pecuniary loss from the rate as set out in the Courts of Justice Act to rates linked to market conditions. With the **most recent** valuation (June 30, 2018), reform adjustments (originally introduced with the June 30, 2015 valuation) specifically related to changes in the nonpecuniary prejudgment interest provision calculation impacting the bodily injury coverage and the applicable interest rate applied to overdue payments in the SABS impacting the accident benefits coverage, were included with the updated industry trend analysis (completed using industry data as at June 30, 2017) and nominal valuation selections, impacting the selection of ultimates. Additional discussion in relation to the application of changes to the prejudgement interest rate on general damages for non-pecuniary loss can be found in section 1.6.

Ontario Bill 91 (Building Ontario Up Act (Budget Measures), 2015) was introduced into the Legislature by the Minister of Finance on April 23, 2015, and received Royal Assent on June 4, 2015. Bill 91 announced a number of amendments to regulations made under the Insurance Act, including updating the Catastrophic Impairment Definition and changes to the standard benefit level under the Statutory Accident Benefits Schedule (SABS); restrictions on insurance premium increases and lowering of the maximum interest rate charged on monthly auto insurance premium payments; and adjustments to the monetary threshold beyond which the tort deductible does not apply to reflect inflation (adjustments to reflect inflation in the associated tort deductible were undertaken via an update to regulation 461/96). On August 26, 2015, the Ontario government filed Ontario regulations 250/15 and 251/15 implementing reforms set out in Bill 91. With the most recent valuation (June 30, 2018), reform adjustments (originally introduced with September 30, 2015 valuation) specifically related to changes in the tort threshold and deductibles impacting the bodily injury coverage and changes to the SABS impacting the bodily injury and accident benefits coverages, were included with the updated industry trend analysis (completed using industry data as at June 30, 2017) and nominal valuation estimates, impacting the selection of ultimates. Additional discussion in relation to the application of changes in the tort threshold and

deductibles can be found in section 1.6.

In the **Alberta Treasury Board and Finance Notice 04-2018** (Clarification of Minor Injury Regulation), dated **May 17, 2018**, the Alberta Superintendent of Insurance advised that clarifying amendments have been made to the definition of minor injuries under the Minor Injury Regulation (MIR). With the **most recent** valuation (June 30, 2018), adjustments have been made to our valuation estimates to reflect our estimates of the impact of these amendments, as reflected in the most recent updated industry trend analyses (completed using industry data as at December 31, 2017).

Prince Edward Island Bill 46 (Minor Injury Definition, Pain and Suffering Damages Cap, Schedule B and DCPD) was introduced into the Legislative Assembly on April 25, 2014 and received Royal Assent on May 14, 2014. Bill 46 amends the Insurance Act, introducing enhanced mandatory benefits under Schedule B (these include medical, rehabilitation, funeral, death and loss of income benefits) and a new section 254.2 that applies to all injuries arising from motor vehicle accidents occurring on or after October 1, 2014. The new section 254.2 re-defines "minor personal injury", raises the maximum non-pecuniary damages recoverable by those suffering a "minor personal injury", and sets out a process for annually indexing the monetary cap for inflation. In addition, Bill 46 includes a new section 254.3 which implements Direct Compensation provisions for Property Damage and has been proclaimed into force effective October 1, 2015. With the most recent valuation (June 30, 2018), reform adjustments (originally introduced with the June 30, 2014 valuation) were explicitly taken into account with the updated industry trend analysis (completed using industry data as at June 30, 2017), impacting the selection of ultimates.

The **Supreme Court of Canada** rendered its judgment on **Saadati v Moorhead** (2017 SCC 28, rendered on Jun 2, 2017). Saadati was involved in a collision in July of 2005 in British Columbia and sued the at-fault driver for damages. According to the Supreme Court decision, "The trial judge found that the ... accident caused S[aadati] psychological injuries, including personality change and cognitive difficulties. ...and awarded S[aadati] \$100,000 for non-pecuniary damages." The trial decision was appealed to the BC Court of Appeal where the trial's \$100,000 non-pecuniary award was dismissed. The Supreme Court upheld the \$100,000 non-pecuniary award, determining:

- "A finding of legally compensable mental injury need not rest, in whole or in part, on the claimant proving a recognized psychiatric injury."
- "...a trier of fact adjudicating a claim of mental injury is not concerned with diagnosis, but with symptoms and their effects."
- "Expert evidence can assist in determining whether or not a mental injury has been shown, but where psychiatric diagnosis is unavailable, it remains open to a trier of fact to find on other evidence adduced by the claimant that he or she has proven on a balance of probabilities the occurrence of mental injury."

At the current time, no adjustments have been made to our valuation estimates or views based on the judgment as rendered, and at this point we do not believe this judgment will have a further impact on our valuation results.

1.5 Harmonized Sales Tax - Atlantic Provinces

There have been no changes in these descriptions since last month's Highlights, other than updates to references related to the date of the most recent valuations.

In the **New Brunswick** fiscal 2016-17 provincial budget released February 2, 2016, the New Brunswick Finance Minister announced a 2 percentage point increase in the provincial component of the harmonized sales tax ("HST") **effective July 1st, 2016** increasing the combined HST rate in the province from 13% to 15%. An adjustment for the HST rate increase was included in the updated loss cost trend structures selected using NB PPV and CV Industry data as at December 31, 2017, impacting the selected a priori loss ratios, however, no additional adjustments have been made to the valuation assumptions from the **most recent** valuation (June 30, 2018).

In the **Newfoundland and Labrador** fiscal 2016-17 provincial budget released April 4, 2016, the Newfoundland and Labrador Finance Minister announced a 2 percentage point increase in the provincial component of the HST **effective July 1st, 2016** increasing the combined HST rate in the province from 13% to 15%. An adjustment for the HST rate increase was included in the updated loss cost trend structures selected using NL PPV and CV Industry data as at December 31, 2017, impacting the selected a priori loss ratios, however, no additional adjustments have been made to the valuation assumptions from the **most recent** valuation (June 30, 2018).

In the **Prince Edward Island** fiscal 2016-17 provincial budget released April 19, 2016, the Prince Edward Island Finance Minister announced a 1 percentage point increase in the provincial component of the HST **effective October 1st, 2016** increasing the combined HST rate in the province from 14% to 15%. An adjustment for the HST rate increase was included in the updated loss cost trend structures selected using PE PPV and CV Industry data as at December 31, 2017, impacting the selected a priori loss ratios, however, no additional adjustments have been made to the valuation assumptions from the **most recent** valuation (June 30, 2018).

1.6 Ontario FARM Bodily Injury Case Reserve summary

There have been no changes in these descriptions since last month's Highlights, other than an update to the prejudgment interest adjustment, and updated references related to the date of the most recent valuations and the anticipated posting date for the Actuarial Highlights – Quarterly Valuation report.

With the <u>most recent</u> valuation (June 30, 2018), the impact of recent Ontario Court of Appeal decisions in relation to the application of changes to the prejudgement interest rate on general damages for non-pecuniary loss was reviewed and a nominal valuation adjustment was included impacting accident years 2014 and prior, further discussion will be provided in the "Actuarial Highlights – Quarterly Valuation" report as at June 30, 2018, which is to be posted to the FA later in the fall.

As indicated in section 1.4, reform adjustments, specifically related to changes in the non-pecuniary prejudgment interest provisions in **Ontario Bill 15** and the changes in the tort threshold and deductibles in **Ontario Bill 91** impacting the third party liability - bodily injury coverage for accident years 2015 and subsequent, were included with the updated Ontario Private Passenger Vehicle and Commercial Vehicle industry trend analyses (completed using industry data as at December 31, 2017).

In the Ontario Court of Appeal decisions in El-Khodr v. Lackie (September 19, 2017;

2017 ONCA 716) and Cobb v. Long Estate (**September 19, 2017**; 2017 ONCA 717), the court of appeal ruled that the change to prejudgment interest for non-pecuniary losses from a set level of 5% to the level that applies to pecuniary losses was implemented to achieve particular policy objectives and therefore should have retrospective application (i.e. to be applied to all settlements on or after January 1, 2015). The Ontario Court of Appeal ruling in **El-Khodr v. Lackie** was appealed to the **Supreme Court of Canada**; on June 7, 2018, the Supreme Court of Canada dismissed the application for leave to appeal from the judgment of the Court of Appeal for Ontario.

During the <u>most recent</u> valuation (June 30, 2018), the reform adjustment in relation to the application of changes to the prejudgement interest rate on general damages for non-pecuniary loss, initially introduced with the September 30, 2017 valuation, was decreased from 1.0% to 0.5%. The reform adjustment applied retroactively (using negative IBNR) against bodily injury nominal unpaid claims amounts (outstanding case reserve and selected IBNR) impacting accidents years 2014 and prior, will be reduced at each successive valuation, assuming the impact of this product reform change will be fully reflected in outstanding case reserves by the September 30, 2018 valuation (that is, as this adjustment is unwound, it is anticipated that member settlement and case adjustment activity will occur simultaneously, neutralizing the adjustment unwind).

In addition to the above, in the Ontario Court of Appeal decisions in El-Khodr v. Lackie (September 19, 2017; 2017 ONCA 716) and Cobb v. Long Estate (September 19, 2017; 2017 ONCA 717), the court of appeal ruled that the changes to the tort deductible and monetary threshold were implemented to achieve particular policy objectives and therefore should have retrospective application (i.e. to be applied to all settlements on or after January 1, 2015). The Facility Association view, consistent with these decisions, is that the changes to the bodily injury tort threshold and deductibles are on a settlement date basis. With the <u>most recent</u> valuation (June 30, 2018), no additional reform adjustment was included as we have assumed the retroactive impact of this product reform change has been fully reflected in outstanding case reserves.

Recognizing that individual members may interpret these results differently, we have included a table at the top of the next page displaying the Ontario FARM Third Party Liability – Bodily Injury Case Reserves (December 31, 2017⁸) by accident year as well as projected average duration, from accident date to projected settlement date, from the December 31, 2017 valuation paid emergence projection model. No attempt has been made to distinguish case reserves held for pecuniary versus non-pecuniary losses, nor in estimating the amount of prejudgment interest, if any, is included in the case reserve estimates.

⁷**Pecuniary** awards are defined on the Ontario Attorney General's website as "Damages that can be measured in money (i.e., special damages)" with special damages further defined as "Damages intended to compensate a plaintiff for a quantifiable monetary loss. Examples of such losses include: lost earnings, medical bills, and repair costs." In contrast, **non-pecuniary** awards defined as "Damages that cannot be measured in money, but nevertheless are compensated for with money (i.e., general damages)" with general damages further defined as "Damages for non-monetary losses suffered by a plaintiff. These damages are not capable of exact quantification. Examples of such losses suffered include pain, suffering, and disfigurement."

⁸As we anticipate the full impact of the reforms will be accounted for in case reserves by December 31, 2018 and therefore with the 2018 Q4 valuation, we anticipate being able to remove this section when that valuation is implemented with the March 2019 Operational Report.

2016	3,418,942	1.5	2.9	4.4
2017	1,944,164	0.5	3.7	4.2
TOTAL	31,739,849	5.6	2.6	8.2

In the above table, the column "projected avg duration" is an estimate of the number of years from claim occurrence to claim settlement, via summing the average number of years from claim occurrence to December 31, 2017 (3rd column) and from December 31, 2017 to settlement (4th column).

1.7 Current Provision Summary

The charts at the top of the next page show the current levels of **indemnity only**¹⁰ claims amounts

⁹Prejudgment interest in Ontario applies to the period from the date the claim is reported, not from the time of occurrence. We have provided the latter to allow actuarial judgment to be applied in estimating the lag between occurrence and reporting.

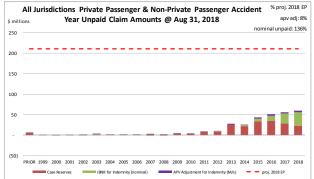

¹⁰Servicing Carriers for the Residual Market are compensated via an initial claims fee paid as a percentage of earned premium. This fee is retroactively adjusted and settled at age 72 months for each accident year based on the formula as laid out in the Plan of Operation. The claims fee is meant to cover Servicing Carrier costs for claims management and adjudication except for certain categories of claims expenses (first party legal and professional consulting fees as described in the Facility Association's "Claims Guide" manual under the "Legal & Professional Fees" section). These latter fees are reimbursable upon proof of closure of the applicable coverage of the claim, and upon verification of eligibility.

We refer to these fees/expenses collectively as "claims fees and allowed claims expenses" and these are generally NOT included in this discussion, although reference is made to them from time to time as deemed appropriate. The claims fees and allowed claims expenses may be reviewed in the valuation process and any associated changes in unpaid amounts are reflected in the Participation

booked by accident year¹¹. The left chart displays life-to-date indemnity payments, case reserves, IBNR and the total including actuarial present value adjustments against accident year earned premium. The right chart shows the associated dollar amounts for the components of the unpaid claims liabilities and the current projected amount of 2018 full year earned premium (the red hashmark line) to provide some perspective.

"M/S" refers to "Member Statement" values – that is, actuarial present value adjustments at the selected discount rate.

The current actuarial present value adjustments balance associated with indemnity (\$17.5 million – see table below) represents 8% of the earned premium projected for the full year 2018 (see the upper right corner of the right chart above). If our current estimates of the nominal claim liabilities amounts prove to match actual claims payments, the actuarial present value adjustments will be released into the net operating result over future periods as the associated claims are settled. Similarly, if reimbursement to Servicing Carriers for claims fee adjustments and allowed claims expenses match our current "retro claims" nominal liability estimate shown in the table below, the associated \$3.7 million of actuarial present value adjustments would be released into future net operating results.

claim	liabilitie	s (\$000s)

	amt	%
case	204,152	67.0%
ibnr	83,129	27.3%
M/S apv adj	17,501	5.7%
M/S indemnity	304,782	100.0%
retro claims	28,454	
retro apv adj	3,720	
M/S total	336,956	

The table to the left breaks down the Member Statement (M/S) unpaid claims liabilities total into its component parts. The first four rows of this table reflect indemnity only as indicated, with the majority of the unpaid in case reserves. The unpaid claims fees and allowed claims expenses liability is shown in the row labelled "retro claims" (see footnote 10 on page 13) and the actuarial present value adjustment associated

with this latter provision is presented in the "retro apv adj" row.

The tables at the top of the next page summarize premium and policy liabilities (the "M/S apv adjust." row for premium liabilities includes the amount associated with claims fees and allowed claims adjustment expenses).

Report. The collective provision for the claims fees and allowed claims expenses is referred to as the "Retro Claims" provision and is presented in Table 02b in section 2.2.

¹¹The loss ratio chart has been limited to show the most recent 20 accident years; the unpaid provision chart has been limited to show the most recent 20 accident years, and show all accident years older than 20 years collectively as "PRIOR".

premium liabilities (\$000s)		policy liabilities (\$000s)				
	amt	%		amt	%		
unearned prem	123,335	107.8%	claim	315,735	69.9%		
prem def/(dpac)	(9,573)	(8.4%)	premium	113,762	25.2%		
M/S apv adjust.	666	0.6%	M/S apv adjust.	21,887	4.8%		
M/S total	114 428	100.0%	M/S total	451 384	100.0%		

Total policy liabilities are summarized by jurisdiction in the table to the right. Collectively, the Atlantic provinces represent the largest exposure, with \$172.2 million in policy liabilities (on an actuarial present value basis; rounding differences apply between the total in the table to the right and _ the policy liabilities table above and to the right).

M/S total by juris (round	ed at juris level)
Ontario	152,175
Alberta	115,092
Newfoundland & Labrador	66,108
New Brunswick	53,485
Nova Scotia	41,195
Prince Edward Island	11,419
Yukon	4,303
Northwest Territories	6,064
Nunavut	1,544
All Jurisdictions	451,385

2 Activity During the Month of August 2018¹²

2.1 Recorded Premium and Claims Activity

The tables at the top of the next page summarize two "views" (by jurisdiction and by accident year group) of the extent to which premiums and claims amounts recorded during the month differ from estimates reflected in the prior month's Participation Report.

¹²There may be differences between the values shown in this document and associated values in the Bulletin and / or Participation Report, and even in tables within this document, due to rounding.

(Recorded transaction amounts exclude IBNR & other actuarial provisions)

Claims activity varies monthly in part due to "process variance" – that is, due to the nature of the claims reporting, recording and adjudication processes. Each month, the projection variances are reviewed for signs of projection bias and to identify potential ways to reduce the level of the variance. Commentary from our review is provided in the sub-sections that follow.

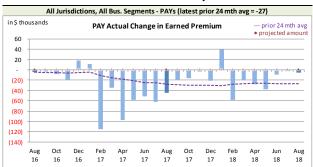

2.1.a Actual vs. Projected (AvsP): Earned Premium

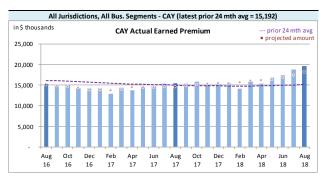

The charts at the top of the next page show actual **earned premium**¹³ in each of the most recent 25 calendar months, along with a "prior 24-month average" to show how each month's actual compare with the average amount of the preceding 24 calendar months.

¹³Premium is earned on a daily basis based on the transaction term measured in days. As a result, months with 31 days earned relatively more than those with 30 days, and February earns the least.

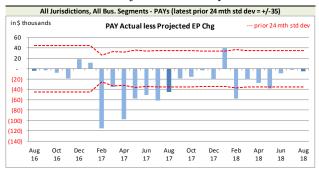

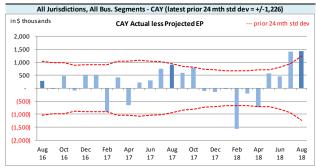

Earned premium changes during a given calendar month in relation to prior accident years tend to be at modest levels.

The associated variance between the actual changes and the projections from the previous month are shown in the charts below. **Earned premium** change projections are all attributed to the current accident year as the projection upload does not accept **earned premium** changes for other accident years. We do not see this limitation as being significant for our purposes, but it does mean that the actual less projection variance will equal the actual **earned premium** change in relation to prior accident years.

FARM Actual vs. Projected Summary: Earned Premium Variances by Calendar Month

On Latest \$ thousands					
Earned Premium	PAYs	CAY			
Mthly Avg EP Chg (prior 24 mths)	(27)	15,192			
std dev	35	1,226			
A-P ⇔ std dev	10	4			
% <> std dev	40.0%	16.0%			
norm <> std dev	31.7%	31.7%			

Our admittedly simple approach to projecting **earned premium** changes from projected written premium levels (and uploading all projections as current accident year (CAY)) does not indicate bias¹⁴ on a 24-month lag basis (ignoring the prior accident years' (PAYs) variances, which tend to be small relative to monthly premium overall).

Starting with projections included in the March 2017 Participation Report, we adjusted the earned premium projection to more accurately reflect the number of days of earning per month (the previous methodology was based on the simplifying assumption of equal days in all months). Over time, we may consider other projection approaches to narrow monthly variances.

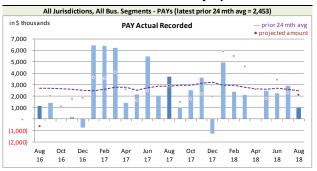

¹⁴For the binomial distribution with 24 trials and an assumed 50% success probability, the 95% confidence range is 7 to 17 "successes". That is, favourable or <u>unfavourable</u> counts of 0 to 6 or 18 to 24 out of 24 outcomes would suggest bias.

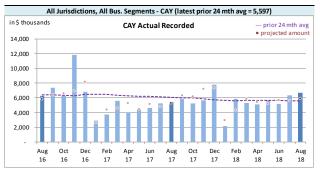

2.1.b AvsP: Recorded Indemnity

The charts immediately below show actual **recorded indemnity** activity (**paid indemnity** plus case changes) in each of the most recent 25 calendar months, along with a "prior 24-month average" to show how each month's actual compares with the average amount of the preceding 24 calendar months.

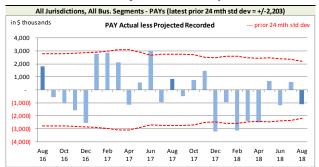

FARM Actual **Recorded Indemnity** by Calendar Month

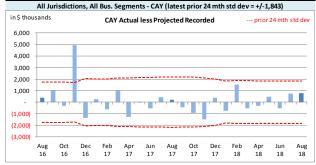

Recorded indemnity activity variances from the previous month's projections are shown in the charts immediately below, including the "prior 24-month standard deviation" levels.

FARM Actual vs. Projected Summary: Recorded Indemnity Variances by Calendar Month

On Latest S	On Latest \$ thousands					
Recorded	PAYs	CAY				
Mthly Avg Recorded (prior 24 mths)	2,453	5,597				
std dev	2,203	1,843				
A-P <> std dev	4	1				
% <> std dev	16.0%	4.0%				
norm <> std dev	31.7%	31.7%				

With respect to **recorded indemnity**, 16% of the prior accident years' (PAYs) variances over the last 25 calendar months have fallen outside of one standard deviation of the actual **recorded indemnity** (see table on left), suggesting the projection process performs better than simply projecting the prior 24-month average amount

(assuming it follows a normal distribution). Bias has not been indicated at a 95% confidence level on a lagging 24-month basis. However, we have noted that 7 of the last 9¹⁵ PAYs had recorded activity actuals that were lower than projected, with 3 of the 7 favourable variances falling outside the one standard deviation band (see left chart above). We have made some adjustments to our projections to reflect these findings and continue to monitor.

¹⁵Again assuming a binomial distribution with a 50% probability of "success" for each trial, 7 "successes" of 9 trials has about a 7% probability of occurring randomly.

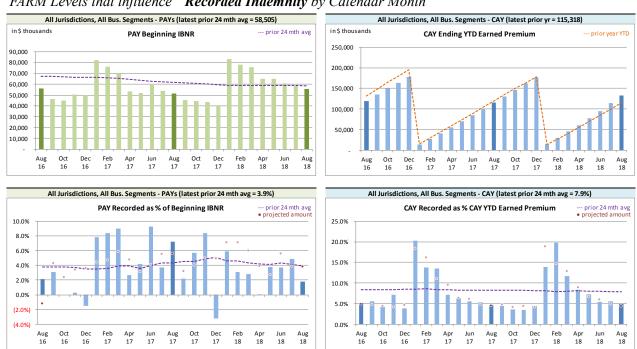

The current accident year (CAY) recorded indemnity variances fell outside of one standard deviation 4% of the time over the last 25 calendar months (see table at the bottom of the previous page), suggesting the projection process performs better than simply projecting the prior 24-month average amount. No bias has been indicated at a 95% confidence level on a lagging 24-month basis.

The method for establishing IBNR adjusts automatically for changes in earned premium and **recorded indemnity** activity level (see sections 2.2 and 3).

We have included, for reference, additional charts immediately below related to levels influencing recorded indemnity activity.

FARM Levels that influence 16 **Recorded Indemnity** by Calendar Month

We track beginning prior accident years' IBNR as **recorded indemnity** activity "comes out of" IBNR. Changes in the prior accident years' beginning IBNR (see upper left chart within the group of charts immediately above) occur for several possible reasons:

- to offset actual **recorded indemnity** activity (through loss ratio matching);
- the annual switchover as a current accident year becomes a prior accident year (occurs in January); and
- when a new valuation is implemented, where the valuation resulted in changes to the selection of prior accident years' ultimate (will show up as a beginning IBNR change one month after the valuation is implemented, i.e. the change will generally show in April, June, September, and November).

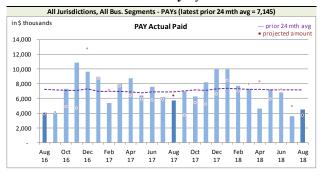

¹⁶Our recorded indemnity projections for the prior accident years are based on selected ratios of recorded indemnity to beginning unpaid balances, whereas the current accident year projections are based on selected ratios of year-to-date IBNR to year-to-date selected ultimate indemnity (i.e. selected LR x earned premium), deriving year-to-date recorded as selected ultimate less IBNR. In both cases, ratio selection is based on consideration of recent recorded indemnity levels and AvsP analyses.

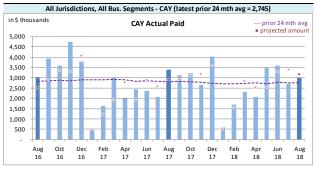

2.1.c AvsP: Paid Indemnity

The charts immediately below show actual **paid indemnity** activity in each of the most recent 25 calendar months, along with a "prior 24-month average" to show how each month's actual compares with the average amount of the preceding 24 calendar months.

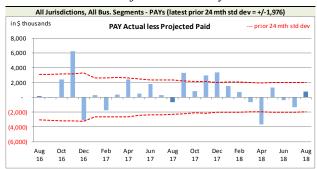

FARM Actual **Paid Indemnity** by Calendar Month

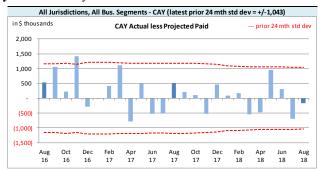

The charts immediately below show actual less projected **paid indemnity** activity for the last 25 calendar months, along with bands for the "prior 24-month standard deviations" to show how the variances from projection compare with historical standard deviations.

FARM Actual vs. Projected Summary: **Paid Indemnity** Variances by Calendar Month

On Latest S	5	
Paid	PAYs	CAY
Mthly Avg Paid (prior 24 mths)	7,145	2,745
std dev	1,976	1,043
A-P <> std dev	5	1
% <> std dev	20.0%	4.0%
norm <> std dev	31.7%	31.7%

With respect to **paid indemnity**, 20% of the prior accident years' (PAYs) variances over the last 25 calendar months have fallen outside of one standard deviation of the actual **paid indemnity** amounts (see table on left), suggesting the projection process has performed better than simply projecting the prior 24-month average

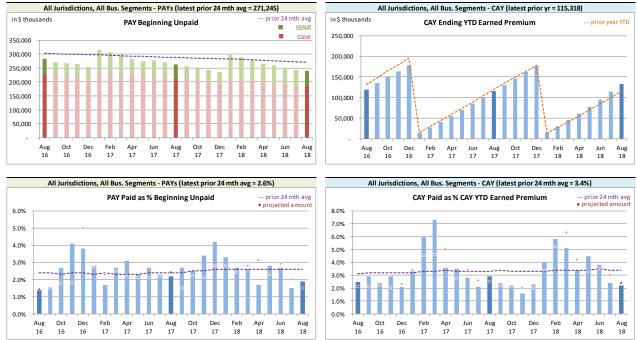

amount (assuming it follows a normal distribution). No bias has been indicated at a 95% confidence level on a lagging 24-month basis, although there was bias evident through 2017 (our process was adjusted as a result).

The current accident year (CAY) **paid indemnity** variances fell outside of one standard deviation 4% of the time over the last 25 calendar months (see table above), suggesting that the projection process performs better than simply projecting the prior 24-month average amount. No bias has been indicated at a 95% confidence level on a lagging 24-month basis.

We have included, for reference, additional charts immediately below related to levels influencing **paid indemnity** activity.

We track beginning prior accident years' unpaid balance (case and IBNR) as **paid indemnity** activity "comes out of" the unpaid balance. Changes in the prior accident years' beginning unpaid balance (see upper left chart within the group of charts immediately above) occur for several possible reasons:

- to offset actual **paid indemnity** activity (may reduce case or IBNR or both);
- the annual switchover as a current accident year becomes a prior accident year (occurs in January); and
- when a new valuation is implemented, where the valuation resulted in changes to the selection of prior accident years' ultimate (will show up as a beginning unpaid balance change one month after the valuation is implemented, i.e. the change will generally show in April, June, September, and November).

2.2 Actuarial Provisions

An "ultimate loss ratio matching method" (described in section 3) is used to determine the month's IBNR¹⁸ for accident years 1994 and later (IBNR is kept at \$0 for accident years 1993 and earlier).

¹⁷Our projections for the prior accident years are based on selected ratios of paid indemnity to beginning unpaid balances, whereas the current accident year projections are based on selected ratios of year-to-date paid indemnity to year-to-date selected ultimate indemnity (i.e. selected LR x earned premium). In both cases, ratio selection is based on consideration of recent paid indemnity levels and AvsP analyses.

¹⁸For ease of discussion, "IBNR" is used in place of "provisions for incurred but not recorded (IBNR) and development".

Factors are applied to the nominal unpaid claims liability (case plus IBNR – for indemnity only) to determine the discount amount (shown as a negative value to indicate its impact of reducing the liability) and the Provisions for Adverse Deviations.

The loss ratios and the factors used to determine the current provisions were based on the most recent valuation (June 30, 2018 for all jurisdictions). The table immediately below summarizes variances in provisions included in this month's Participation Report and the associated one-month projections from last month's Report.

FARM Actual vs Projected Summary: IBNR and APV Amounts (\$ thousands)

Table 02a			actuarial present value adjustments					
	IBI	ND.	Discount	Amount	Provisions for Adverse		IBNR + actuarial present	
_	IDI	VIX	Discount	Discount Amount		Deviations		justments
Accident	Actual	Actual less	Actual	Actual less	Actual	Actual less	A -t l	Actual less
Year	Actual	Projected	Actual	Projected	Actual	Projected	Actual	Projected
Prior	13,651	1,653	(6,680)	1,610	13,432	(970)	20,403	2,293
2016	12,674	(1,986)	(2,047)	202	5,523	(467)	16,150	(2,251)
2017	23,378	(3,509)	(2,581)	348	6,126	(711)	26,923	(3,872)
2018	33,426	41	(2,899)	104	6,627	95	37,154	240
TOTAL	83,129	(3,801)	(14,207)	2,264	31,708	(2,053)	100,630	(3,590)

The IBNR provision is \$3.8 million lower than projected from last month, counterbalancing the recorded claims activity and earned premium variance impacts indicated in section 2.1, and due to the valuation implementation.

Exhibit G shows the accident year IBNR amount change from last month to this month broken down into:

- (i) the change projected last month;
- (ii) the additional change due to variances in earned premium (because we apply a loss ratio to earned premium in determining ultimate level) and/or recorded claims (as IBNR is calculated as ultimate less recorded) differences; and
- (iii) the additional change due to valuation implementation impacts (as applicable)

The variances associated with (ii) above are discussed in sections 2.1.a and 2.1.b.

In addition to the provisions for indemnity amounts, provisions are established for certain adjustments to Servicing Carrier claims fees and for certain reimbursable legal and professional claims adjudication fees which we refer to as "allowed claims expenses" (see footnote 10 on page 13). The table at the top of the next page summarizes the variances in these "Retro Claims Provisions" included in this month's Participation Report and the one-month projections from last month's Report. The variances generally reflect earned premium variances by jurisdiction and variances in payments for allowed claims expenses relative to projections, and due to the valuation implementation.

FARM Actual vs. Projected Summary:	"Retro Claims Provision" "19	and APV Amounts (\$ thousands)

	Retro Claims Provision		Discount Amount		Deviations		value adjustments	
Accident	Actual	Actual less	Actual	Actual less	Actual	Actual less	Actual	Actual less
Year	Actual	Projected	Actual	Projected	Actual	Projected	Actual	Projected
Prior	21,549	651	(1,295)	462	2,858	(263)	23,112	850
2016	2,975	(34)	(128)	(1)	889	(78)	3,736	(113)
2017	2,549	124	(143)	(5)	832	(5)	3,238	114
2018	1,381	134	(137)	1	844	(40)	2,088	95
TOTAL	28,454	875	(1,703)	457	5,423	(386)	32,174	946

The table immediately below summarizes the variances in the provisions for the deferred policy acquisition cost amounts (the FARM overall remains in a deferred asset position) included in this month's Participation Report and the one-month projections from last month's Report. The variances are mainly driven by the unearned premium balance variance (at the jurisdiction level), and due to the valuation implementation.

FARM Actual vs. Projected Summary: Premium Deficiency / (DPAC) Amounts (\$\frac{1}{2}\$ thousands)

Table 03	Premium Deficiency / (Deferred Policy Acquisition Costs)		actuarial present value adjustments		Premium Deficiency / (DPAC) including actuarial present value adjustments	
	Actual	Actual less	Actual	Actual less	Actual	Actual less
	Projected			Projected		Projected
balance:	(9,573)	(29)	666	(21)	(8,907)	(50)
balance as % unearned premium:	(7.8%)	0.1%	0.5%	-	(7.2%)	0.1%

actual unearned premium: 123,335 less projected: 2,753

3 Ultimate Loss Ratio Matching Method

An "ultimate loss ratio matching" method continues to be applied to the current month and two projected months shown in the Participation Reports, with IBNR determined by accident year (for accident years 1994 and on) as follows:

- (a) Earned premium to date
- (b) Ultimate loss²⁰ ratio per latest valuation
- (c) Estimated ultimate incurred = (a) x (b)
- (d) Recorded indemnity to date
- (e) IBNR = (c) (d)

IBNR for accident years 1993 and earlier is kept at \$0. For the two projected months, IBNR was

¹⁹ Retro Claims Provision" here refers to the provision for unpaid claims fees & allowed claims expense for Service Carriers in managing and adjudicating claims on behalf of the Facility Association. Non-\$0 actuarial present value adjustments for these provisions were added for the first time with the October 2016 Participation Report. Please see the associated Actuarial Highlights for more information.

²⁰"Loss" here refers to indemnity only unless otherwise noted.

determined in a similar way, incorporating the two-month projections of earned premiums and recorded indemnity. Prior to actuarial present value adjustments, any expected emergence of recorded claims amounts pertaining to "prior accident years". during the two-month projection period is assumed to be offset by changes in IBNR. Furthermore, the implied ultimate loss ratios pertaining to each accident year (including the current accident year) are the same in the current month as in the two projected months.

A similar approach is used in determining the part of the "Retro Claims Provisions" in relation to the allowed claims expenses. That is, an ultimate "ratio" is determined akin to the "loss ratio", and the provision is set following a process as outlined above.

4 Calendar Year-to-Date Results

The table immediately below summarizes the calendar year-to-date results for indemnity as well as Servicing Carrier claims fees & allowed claims expenses. In determining the ratios to earned premium, the calendar year-to-date earned premium has been used, which includes earned premium associated with the current accident year but also earned premium adjustments related to prior accident years.

FARM Calendar Year-to-Date Indemnity, Claims Fees & Allowed Claims Expense Summary (\$ thousands)

Table 04	YTD Nominal Values		YTD actuarial present value adjustment		YTD Total		Change from Prior Month YTD	
	Amount	% EP	Amount	% EP	Amount	% EP	Amount	LR pts
PAYs	(14,958)	(11.2%)		(4.4%)	(20,812)	(15.6%)		(1.4%)
CAY	91,778	68.9%	4,435	3.3%	96,213	72.2%	14,258	0.1%
TOTAL	76,820	57.7%	(1,419)	(1.1%)	75,401	56.6%	9,628	(1.3%)

("% EP" based on 2018 calendar year-to-date earned premium; ratios may not total due to rounding)

In general, prior accident years (PAYs) changes from last month are due to the release of the actuarial present value adjustments with claims payments, except when valuations are implemented. The loss ratio change year-to-date in Table 04 reflects not only changes in the prior accident year levels, but also the increase in the calendar year-to-date earned premium with an additional month's earned premium, and due to the valuation implementation.

For the current accident year, changes in the year-to-date total reflect the additional month's exposure and regular changes to actuarial present value adjustments as the year ages, and due to the valuation implementation.

5 Current Participation Report – Additional Exhibits

Section 6 provides exhibits pertaining to the actuarial provisions reflected in the current month's Participation Report.

IBNR (including actuarial present value adjustments) presented in section 6, Exhibit A, were derived on a discounted basis, and therefore reflect the time value of money and includes explicit provisions for adverse deviations in accordance with accepted actuarial practice in Canada.

²¹"Prior accident years" and the "current accident year" are defined relative to the calendar year associated with the projection period.

IBNR presented in section 6, Exhibit B, does NOT include any actuarial present value adjustments. The "Total IBNR" from this exhibit is shown in the Participation Report as "Undiscounted IBNR".

As discussed in section 3, IBNR in the current month's Participation Report was derived as the difference between the estimated ultimate for the claims amount (i.e. earned premium x ultimate loss ratio) and the associated current recorded amounts (life-to-date payments plus current case reserves).

6 EXHIBITS

The exhibits listed below are provided on the pages that follow:

EXHIBIT A IBNR – for Member Sharing (<u>in</u>cludes Actuarial Present Value Adjustments)

EXHIBIT B IBNR – Nominal Basis (excludes Actuarial Present Value Adjustments)

EXHIBIT C Retro Provisions
