1 Summary

Key points related to this month's Highlights:

- (a) The month's claims activities were generally aligned with projections from last month.
- (b) We continue to see growth in commercial vehicle and interurban vehicle classes that we continue to monitor closely, particularly as there are indications of increased exposures to US claims as a result.

1.1 Valuation Schedule (Fiscal Year 2019)

The November 2019 Participation Report leverages actuarial assumptions consistent with last month (that is, it does not reflect the results of an updated valuation). The table below summarizes the implemented valuations for fiscal year 2019.

FARM FISCAL YEAR 2019 – SCHEDULE OF VALUATIONS						
Valuation Date Discount Rate (per annum)		Participation Report	Description of Changes			
Sep. 30, 2018 (completed)	2.29% mfad: 25 bp	Oct. 2018	updated valuation (roll forward): all jurisdictions; cash flow projections updated; discount rate updated; no changes to selected margins for adverse deviations (interest rate or claims development).			
Dec. 31, 2018 (completed)	1.95% mfad: 25 bp	Mar. 2019	updated valuation: all jurisdictions; cash flow projections updated; discount rate updated; no changes to selected margins for adverse deviations (interest rate or claims development).			
Mar. 31, 2019 (completed)	1.48% mfad: 25 bp	May 2019	updated valuation (roll forward): all jurisdictions; cash flow projections updated; discount rate updated; no changes to selected margins for adverse deviations (interest rate or claims development).			
Jun. 30, 2019 (completed)	1.44% mfad: 25 bp	Aug. 2019	update valuation: all jurisdictions; allowed claims expense ultimates updated; cash flow projections updated; discount rate updated; margins for adverse claims development updated (no change to mfad for interest rate).			
Sep. 30, 2019 (completed)	1.46% mfad: 25 bp	Oct. 2019	updated valuation (roll forward): all jurisdictions; cash flow projections updated; discount rate updated; no changes to selected margins for adverse deviations (interest rate or claims development)			

Under the proposed schedule for fiscal year 2019, the "off-half" valuation quarters ending March 31, 2019 and September 30, 2019 would not reflect a full valuation update of assumptions, but would rather "roll-forward" key assumptions from the previous valuation. As well, all valuations are proposed to include all jurisdictions and business segments (private passenger and non-private

passenger).

1.2 Appointed Actuary and Hybrid Actuarial Services Model

Mr. Cosimo Pantaleo of Ernst & Young LLP (EY) has assumed the Appointed Actuary's role effective as of October 24, 2019, from Liam McFarlane (the Appointed Actuary from June 1, 2013), due to Mr. McFarlane's departure from EY. It is anticipated that Mr. Pantaleo will be formally appointed by the Board at its February 18, 2020 meeting.

Facility Association operates under a "hybrid" model in relation to the management and provision of actuarial services. Under this model, actuarial services are performed by both Facility Association's internal staff and its external actuarial consulting firm. The hybrid model approach maximizes the efficiency of resource allocation while providing access to additional expertise and capacity as needed.

1.3 Consideration of Recent Legal Decisions and Changes in Legislation / Regulation¹

There have been no changes in these descriptions since last month's Highlights.

Consideration and assessment of potential impacts of legal decisions and changes in legislation / regulation constitutes a regular part of the valuation process. Descriptions of some of the more recent changes are provided below.

Ontario Bill 15 (Fighting Fraud and Reducing Automobile Insurance Rates Act, 2014) was introduced into the Legislature by the Minister of Finance on July 15, 2014 and received Royal Assent on November 20, 2014. Bill 15 includes various amendments and provisions such as moving the Ontario Automobile Dispute Resolution System (DRS) for statutory accident benefits from the Financial Services Commission of Ontario to the Ministry of the Attorney General (Licence Appeal Tribunal), regulation of the Tow and Storage Industry (amendments to the Consumer Protection Act and Repair and Storage Liens Act), regulations related to licensing of insurance agents and adjusters, changes to the applicable interest rate applied to overdue payments in the Statutory Accident Benefits Schedule (SABS), and changes to the prejudgment interest rate on general damages for non-pecuniary loss from the rate as set out in the Courts of Justice Act to rates linked to market conditions.

Ontario Bill 91 (Building Ontario Up Act (Budget Measures), 2015) was introduced into the Legislature by the Minister of Finance on April 23, 2015, and received Royal Assent on June 4, 2015. Bill 91 announced a number of amendments to regulations made under the Insurance Act, including updating the Catastrophic Impairment Definition and changes to the standard benefit level under the Statutory Accident Benefits Schedule (SABS); restrictions on insurance premium increases and lowering of the maximum interest rate charged on monthly auto insurance premium payments; and adjustments to the monetary threshold beyond which the tort deductible does not apply to reflect inflation (adjustments to reflect inflation in the associated tort deductible were undertaken via an update to regulation 461/96). On August 26, 2015, the Ontario government filed Ontario regulations 250/15 and 251/15 implementing reforms set out in Bill 91. With the most recent valuation (Sept 30, 2019), reform adjustments (originally introduced with the September 30, 2015 valuation) specifically related to changes to the SABS impacting the bodily injury and accident benefits coverages, were included with the updated industry trend analysis (completed using industry data as

¹This url to a pdf is to a helpful guide on how bills become laws: https://www.ola.org/sites/default/files/common/how-bills-become-law-en.pdf.

at December 31, 2018) and nominal valuation estimates, impacting the selection of ultimates.

In the **Alberta Treasury Board and Finance Notice 04-2018** (Clarification of Minor Injury Regulation), dated **May 17, 2018**, the Alberta Superintendent of Insurance advised that clarifying amendments have been made to the definition of minor injuries under the Minor Injury Regulation (MIR). With the **most recent** valuation (Sept 30, 2019), reform adjustments related to changes in the definition of minor injuries under the MIR, were included with the updated industry trend analyses (completed using industry data as at December 31, 2018), impacting the selection of ultimates.

Prince Edward Island Bill 46 (Minor Injury Definition, Pain and Suffering Damages Cap, Schedule B and DCPD) was introduced into the Legislative Assembly on April 25, 2014 and received Royal Assent on May 14, 2014. Bill 46 amends the Insurance Act, introducing enhanced mandatory benefits under Schedule B (these include medical, rehabilitation, funeral, death and loss of income benefits) and a new section 254.2 that applies to all injuries arising from motor vehicle accidents occurring on or after October 1, 2014. The new section 254.2 re-defines "minor personal injury", raises the maximum non-pecuniary damages recoverable by those suffering a "minor personal injury", and sets out a process for annually indexing the monetary cap for inflation. In addition, Bill 46 includes a new section 254.3 which implements Direct Compensation provisions for Property Damage and has been proclaimed into force effective October 1, 2015. With the most recent valuation (Sept 30, 2019), reform adjustments (originally introduced with the June 30, 2014 valuation) were explicitly taken into account with the updated industry trend analysis (completed using industry data as at December 31, 2018), impacting the selection of ultimates.

The **Nova Scotia Court of Appeal** confirmed, in a unanimous decision released on **January 18, 2019** in relation to **Sparks v Holland** (**2019 NSCA 3**), that future Canada Pension Plan (CPP) disability benefits are deductible from future income loss awards in motor-vehicle accident claims in that province. Sparks sustained injuries as a result of a motor vehicle accident in Nova Scotia and sought damages for personal injuries and loss of income. The decision supported an earlier decision (Tibbets v Murphy, 2017 NSCA 35) that both past and future CPP disability benefits are deductible under section 133A of the Insurance Act. At the current time, no adjustments have been made to our valuation estimates as a result of this decision.

1.4 Harmonized Sales Tax - Atlantic Provinces

There have been no changes in these descriptions since last month's Highlights.

In the **New Brunswick** fiscal 2016-17 provincial budget released February 2, 2016, the New Brunswick Finance Minister announced a 2 percentage point increase in the provincial component of the harmonized sales tax ("HST") **effective July 1, 2016** increasing the combined HST rate in the province from 13% to 15%. No explicit additional adjustments have been made to the valuation assumptions from the **most recent** valuation (Sept 30, 2019), on the basis that current estimates have implicitly incorporated the impact.

In the **Newfoundland and Labrador** fiscal 2016-17 provincial budget released April 4, 2016, the Newfoundland and Labrador Finance Minister announced a 2 percentage point increase in the provincial component of the HST **effective July 1, 2016** increasing the combined HST rate in the province from 13% to 15%. No explicit additional adjustments have been made to the valuation assumptions from the **most recent** valuation (Sept 30, 2019), on the basis that current estimates have implicitly incorporated the impact.

In the **Prince Edward Island** fiscal 2016-17 provincial budget released April 19, 2016, the Prince Edward Island Finance Minister announced a 1 percentage point increase in the provincial component of the HST **effective October 1, 2016** increasing the combined HST rate in the province from 14% to 15%. An adjustment for the HST rate increase was included in the updated loss cost trend structures selected using PE PPV and CV Industry data as at December 31, 2017, impacting the selected a priori loss ratios, however, no additional adjustments have been made to the valuation assumptions from the **most recent** valuation (Sept 30, 2019).

1.5 Harmonized Sales Tax Class Action – Ontario

There have been no changes in these descriptions since last month's Highlights.

Since the end of October 2018, class action lawsuits have been brought against multiple insurers related to HST and limits / sub-limits of benefits per the Statutory Accident Benefits Schedule and FSCO's Professional Services Guideline as part of claims settlement practices in Ontario.

At the current time, no adjustments have been made to our valuation estimates, but in conjunction with FA's Appointed Actuary, FA management continues to review and consider the implications of the potential outcomes related to the class action lawsuits. Please contact Shawn Doherty at sdoherty@facilityassociation.com if you need further information.

1.6 Current Provision Summary

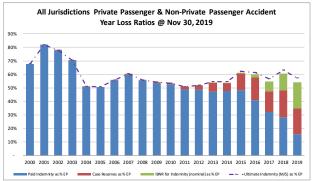

The charts at the top of the next page show the current levels of **indemnity only**² claims amounts booked by accident year³. The left chart displays life-to-date indemnity payments, case reserves, IBNR and the total including actuarial present value adjustments against accident year earned premium. The right chart shows the associated dollar amounts for the components of the unpaid claims liabilities and the current projected amount of 2019 full year earned premium (the red hash-mark line) to provide some perspective.

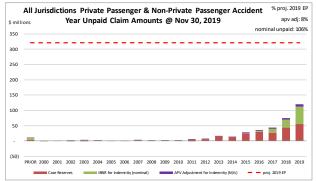

²Servicing Carriers for the FARM are compensated via an initial claims fee paid as a percentage of earned premium. This fee is retroactively adjusted and settled at age 72 months for each accident year based on the formula as laid out in the Plan of Operation. The claims fee is meant to cover Servicing Carrier costs for claims management and adjudication except for certain categories of claims expenses (first party legal and professional consulting fees as described in the Facility Association's "Claims Guide" manual under the "Legal & Professional Fees" section). These latter fees are reimbursable upon proof of closure of the applicable coverage of the claim, and upon verification of eligibility.

We refer to these fees/expenses collectively as "claims fees and allowed claims expenses" and these are generally NOT included in this discussion, although reference is made to them from time to time as deemed appropriate. The claims fees and allowed claims expenses may be reviewed in the valuation process and any associated changes in unpaid amounts are reflected in the Participation Report. The collective provision for the claims fees and allowed claims expenses is referred to as the "Retro Claims" provision and is presented in Table 02b in section 2.2.

³The loss ratio chart has been limited to show the most recent 20 accident years; the unpaid provision chart has been limited to show the most recent 20 accident years, and show all accident years older than 20 years collectively as "PRIOR".

"M/S" refers to "Member Statement" values – that is, actuarial present value adjustments at the selected discount rate.

The current actuarial present value adjustments balance associated with indemnity (\$25.7 million – see table below) represents 8% of the earned premium projected for the full year 2019 (see the upper right corner of the right chart above). If our current estimates of the nominal claim liabilities amounts prove to match actual claims payments, the actuarial present value adjustments will be released into the net operating result over future periods as the associated claims are settled.

Similarly, if reimbursement to Servicing Carriers for claims fee adjustments and allowed claims expenses match our current "retro claims" nominal liability estimate shown below, the associated \$4.7 million of actuarial present value adjustments would be released into future net operating results.

claim liabilities (\$000s

	amt	%
case	230,850	63.0%
ibnr	109,883	30.0%
M/S apv adj	25,655	7.0%
M/S indemnity	366,388	100.0%
retro claims	28,049	
retro apv adj	4,725	
M/S total	399,162	

The table to the left breaks down the Member Statement (M/S) unpaid claims liabilities total into its component parts. The first four rows of this table reflect indemnity only as indicated, with the majority of the unpaid in case reserves. The unpaid claims fees and allowed claims expenses liability is shown in the row labelled "retro claims" (see footnote 2 on page 5) and the actuarial present value adjustment associated with this latter provision is presented in the "retro apv

adj" row.

The tables below summarize premium and policy liabilities (the "M/S apv adjust." row for premium liabilities includes the amount associated with claims fees and allowed claims adjustment expenses).

premium nabilitie	es (3000s)	
	amt	%
unearned prem	176,406	108.2%
prem def/(dpac)	(13,535)	(8.3%)
M/S apv adjust.	109	0.1%
M/S total	162,980	100.0%

policy liabilities (\$000s)

_	amt	%
claim	368,782	65.6%
premium	162,871	29.0%
M/S apv adjust.	30,489	5.4%
M/S total	562,142	100.0%

policy liabilities (\$000s)					
M/S total by juris (rounded at juris level)					
Ontario	202,515				
Alberta	159,975				
Newfoundland & Labrador	74,412				
New Brunswick	51,478				
Nova Scotia	50,575				
Prince Edward Island	11,992				
Yukon	4,056				
Northwest Territories	5,413				
Nunavut	1,727				
All Jurisdictions	562,143				

Total policy liabilities (on an actuarial present value basis) are summarized by jurisdiction in the table to the left.

Ontario has the largest share of any single jurisdiction (accounting for approximately 36% of the total policy liabilities). Collectively, the Atlantic provinces are second largest, accounting for approximately 34% (\$188 million).

2 Activity During the Month of November 2019⁴

2.1 Recorded Premium and Claims Activity

The tables at the below and at the top of the next page summarize two "views" (by jurisdiction and by accident year group) of the extent to which premiums and claims amounts recorded during the month differ from estimates reflected in the prior month's Participation Report.

FARM Actual vs. Projected Summary: Recorded Indemnity Transaction Amounts (\$ thousands) by Jurisdiction

Table	Earned Premium		Paid Indemnity		Case increase /		Recorded Indemnity	
01a					(decrease)		increase / (decrease)	
Juris-	Actual	Actual less	Actual	Actual less	Actual	Actual less	Actual	Actual less

2019	30,911	1,685	6,469	660	6,058	(1,371)	12,527	(711)
TOTAL	30,944	1,718	14,385	906	(1,817)	(5,266)	12,568	(4,360)

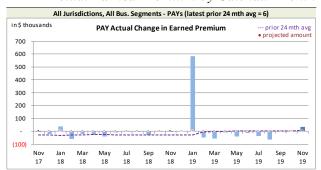

(Recorded transaction amounts exclude IBNR & other actuarial provisions)

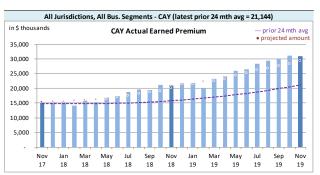

Claims activity varies monthly in part due to "process variance" – that is, due to the nature of the claims reporting, recording and adjudication processes. Each month, the projection variances are reviewed for signs of projection bias and to identify potential ways to reduce the level of the variance. Commentary from our review is provided in the sub-sections that follow.

2.1.a Actual vs. Projected (AvsP): Earned Premium

The charts at the below show actual **earned premium**⁵ in each of the most recent 25 calendar months, along with a "prior 24-month average" to show how each month's actual compare with the average amount of the preceding 24 calendar months.

FARM Actual Earned Premium by Calendar Month

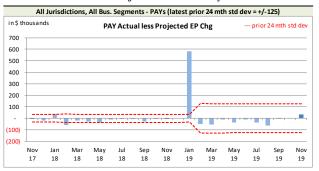

Earned premium changes during a given calendar month in relation to prior accident years tend to be at modest levels (the January 2019 prior accident years (PAYs) change was unusually high due to late recorded new business commercial (CV) and interurban (IU) policies). Current accident year (CAY) earned premium growth in recent months is related to significant <u>in</u>creases in CV and IU vehicles, with 2018 written premium for these two classes <u>in</u>creasing by \$61 million (accounting for the bulk of the \$65 million or 57% <u>in</u>crease in total FARM non-PPV written premium during 2018). This issue was discussed in the January 2019 Highlights. Year-to-date to November 2019, written premium for these two classes (CV and IU) at \$171.1 million is up \$64.2 million (60.0%) from the same period in 2018. As a result, the 2019 year-to-date written premium for those 2 classes is over 3 times the amount written during the same period in 2017 (\$53.3 million).

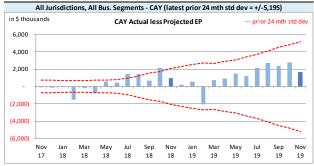

⁵Premium is earned on a daily basis based on the transaction term measured in days. As a result, months with 31 days earned relatively more than those with 30 days, and February earns the least.

The associated variance between the actual changes and the projections from the previous month are shown in the charts below. **Earned premium** change projections are all attributed to the current accident year as the projection upload does not accept **earned premium** changes for other accident years. We do not see this limitation as being significant for our purposes, but it does mean that the actual less projection variance will equal the actual **earned premium** change in relation to prior accident years.

FARM Actual vs. Projected Summary: Earned Premium Variances by Calendar Month

On Latest \$ thousands					
Earned Premium	PAYs	CAY			
Mthly Avg EP Chg (prior 24 mths)	6	21,144			
std dev	125	5,195			
A-P <> std dev	4	5			
% <> std dev	16.0%	20.0%			
norm <> std dev	31.7%	31.7%			
performance vs 24-mth avg:	better	better			

Our admittedly simple approach to projecting **earned premium** changes from projected written premium levels (and uploading all projections as current accident year (CAY)) does indicate bias⁶ on a running 25-month basis (ignoring the prior accident years' (PAYs) variances, which tend to be small relative to monthly premium overall), as 18 of the latest 25 have been higher than projected.

We are in the process of considering modifications to our written premium projection process with a goal of narrowing monthly variances and addressing the bias issue.

Further, we are challenged by not only the unusual volumes, but also by concerns of processing delays at the Servicing Carriers as they try to accommodate the rapid growth, particularly in fleet policies. At each fiscal year-end for the FARM (Oct 31), Servicing Carriers are asked to provide estimates of unprocessed business (i.e. written premium). Typically, these amounts are not material for FARM financial statement purposes (for example, amounts for 2018 fiscal year-end were \$6.3 million, and for 2017 were \$2.3 million). However, for fiscal 2019, the unprocessed business estimate is \$26.5 million. As a result, we will be reflecting this directly in the FARM financial statements (expected release at the FA Annual General Meeting scheduled for February 20, 2020). However, no adjustments will be made to FARM Participation Reports. Note that the unprocessed business impacts would be to unearned premium and, to the extent we estimate amounts are earned, operating results would also be impacted. As the FARM operates overall at an operating surplus, the latter impact is expected to be slightly accretive to the operating surplus.

2.1.b AvsP: Recorded Indemnity

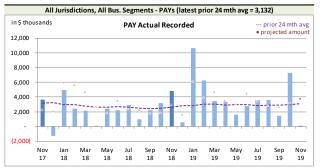

The charts at the top of the next page show actual **recorded indemnity** activity (paid indemnity plus

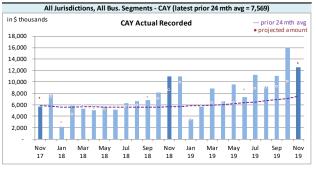

⁶For the binomial distribution with 25 trials and an assumed 50% success probability, the 95% confidence range is 8 to 17 successes. That is, favourable or unfavourable counts of 0 to 7 or 18 to 25 out of 25 outcomes would suggest bias.

case changes) in each of the most recent 25 calendar months, along with a "prior 24-month average" to show how each month's actual compares with the average amount of the preceding 24 calendar months.

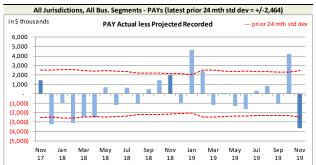

FARM Actual **Recorded Indemnity** by Calendar Month

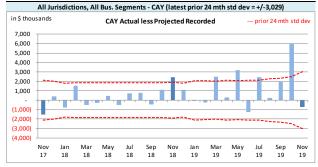

Recorded indemnity activity variances from the previous month's projections are shown in the charts at the below, including the "prior 24-month standard deviation" levels.

FARM Actual vs. Projected Summary: **Recorded** Indemnity Variances by Calendar Month

On Latest S	On Latest \$thousands						
Recorded	PAYs	CAY					
Mthly Avg Recorded (prior 24 mths)	3,132	7,569					
std dev	2,464	3,029					
A-P <> std dev	6	5					
% <> std dev	24.0%	20.0%					
norm <> std dev	31.7%	31.7%					
performance vs 24-mth avg:	better	better					

With respect to **recorded indemnity**, 24% of the prior accident years' (PAYs) variances over the last 25 calendar months have fallen outside of one standard deviation of the actual **recorded indemnity** (see table on the left), suggesting the projection process performs better than simply projecting the prior 24-month average amount (assuming a normal distribution). Bias has not

been indicated at a 95% confidence level on a running 25-month basis (11 of 25 variances were positive).

The PAYs **recorded indemnity** variances were outside of the one standard deviation band this month (see left chart above). The activity was reviewed and attributed to process variance. As a result of the recorded activity being near zero in aggregate, the ratio of recorded to beginning IBNR was close to zero which is not without recent precedence (see chart on next page).

The current accident year (CAY) **recorded indemnity** variances fell outside of one standard deviation 20% of the time over the last 25 calendar months (see table above), suggesting the projection process

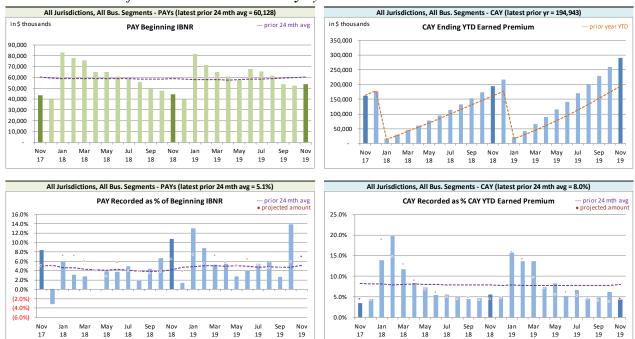

performs better than simply projecting the prior 24-month average amount. Bias has not been indicated at a 95% confidence level on a running 25-month basis (15 of 25 variances were positive).

The method for establishing IBNR adjusts automatically for changes in **earned premium** and **recorded indemnity** activity level (see sections 2.2 and 3).

We have included, for reference, additional charts at the below related to levels influencing **recorded indemnity** activity.

FARM Levels that influence Recorded Indemnity by Calendar Month

We track the PAY beginning IBNR as **recorded indemnity** activity comes out of IBNR. Changes in the PAY beginning IBNR (see upper left chart within the group of charts immediately above) occur for several possible reasons:

- to offset actual recorded indemnity activity (through loss ratio matching);
- the annual switchover as a CAY becomes a PAY (occurs in January); and
- when a new valuation is implemented, where the valuation resulted in changes to the selection of prior accident years' ultimate (will show up as a beginning IBNR change one month after the valuation is implemented, i.e. the change will generally show in April, June, September, and November).

2.1.c AvsP: Paid Indemnity

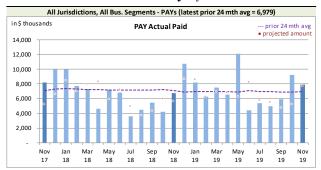

The charts at the top of the next page show actual **paid indemnity** activity in each of the most recent

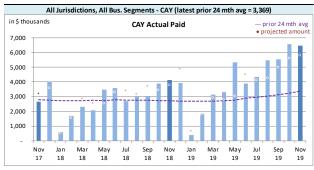

⁷Our recorded indemnity projections for the prior accident years are based on selected ratios of recorded indemnity to beginning unpaid balances, whereas the current accident year projections are based on selected ratios of year-to-date IBNR to year-to-date selected ultimate indemnity (i.e. selected LR x earned premium), deriving year-to-date recorded as selected ultimate less IBNR. In both cases, ratio selection is based on consideration of recent recorded indemnity levels and AvsP analyses.

25 calendar months, along with a "prior 24-month average" to show how each month's actual compares with the average amount of the preceding 24 calendar months.

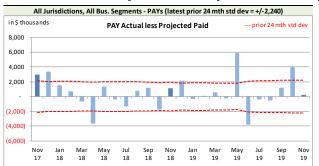

FARM Actual Paid Indemnity by Calendar Month

The charts below show actual less projected **paid indemnity** activity for the last 25 calendar months, along with bands for the "prior 24-month standard deviations" to show how the variances from projection compare with historical standard deviations.

FARM Actual vs. Projected Summary: Paid Indemnity Variances by Calendar Month

On Latest \$ thousands						
Paid	PAYs	CAY				
Mthly Avg Paid (prior 24 mths)	6,979	3,369				
std dev	2,240	1,500				
A-P <> std dev	7	2				
% <> std dev	28.0%	8.0%				
norm <> std dev	31.7%	31.7%				
performance vs 24-mth avg:	no better	better				

With respect to **paid indemnity**, 28% of the prior accident years' (PAYs) variances over the last 25 calendar months have fallen outside of one standard deviation of the actual **paid indemnity** amounts (see table on left), suggesting the projection process has performed no better than simply projecting the prior 24-month average amount (assuming it follows a normal

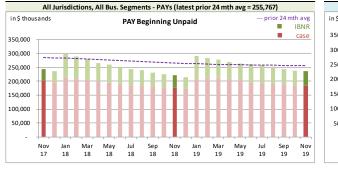

distribution). Bias has not been indicated at a 95% confidence level on a running 25-month basis (15 of 25 variances are positive).

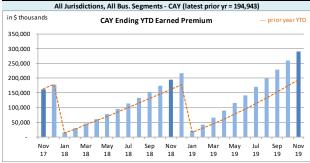

The current accident year (CAY) **paid indemnity** variances fell outside of one standard deviation 8% of the time over the last 25 calendar months (see table above), suggesting that the projection process performs better than simply projecting the prior 24-month average amount. Bias has not been indicated at a 95% confidence level on a running 25-month basis (16 of 25 variances are positive).

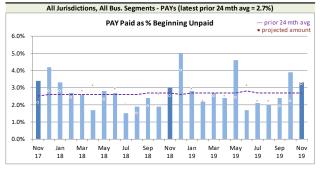

We have included, for reference, additional charts at the top of the next page related to levels influencing **paid indemnity** activity.

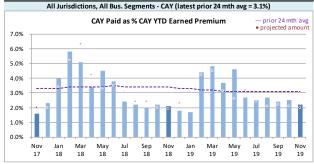

We track the PAY beginning unpaid balance (case and IBNR) as **paid indemnity** activity "comes out of" the unpaid balance. Changes in the PAY beginning unpaid balance (see upper left chart within the group of charts immediately above) occur for several possible reasons:

- to offset actual **paid indemnity** activity (may reduce case or IBNR or both);
- the annual switchover as a current accident year becomes a prior accident year (occurs in January); and
- when a new valuation is implemented, where the valuation resulted in changes to the selection of prior accident years' ultimate (will show up as a beginning unpaid balance change one month after the valuation is implemented, i.e. the change will generally show in April, June, September, and November).

2.2 Actuarial Provisions

An "ultimate loss ratio matching method" (described in section 3) is used to determine the month's IBNR⁹ for accident years 1994 and later (IBNR is kept at \$0 for accident years 1993 and earlier).

Factors are applied to the nominal unpaid claims liability (case plus IBNR – for indemnity only) to determine the discount amount (shown as a negative value to indicate its impact of reducing the liability) and the Provisions for Adverse Deviations.

⁸Our projections for the prior accident years are based on selected ratios of paid indemnity to beginning unpaid balances, whereas the current accident year projections are based on selected ratios of year-to-date paid indemnity to year-to-date selected ultimate indemnity (i.e. selected LR x earned premium). In both cases, ratio selection is based on consideration of recent paid indemnity levels and AvsP analyses.

⁹For ease of discussion, "IBNR" is used in place of "provisions for incurred but not recorded (IBNR) and development".

The loss ratios and the factors used to determine the current provisions were based on the most recent valuation (Sept 30, 2019 for all jurisdictions). The table below summarizes variances in provisions included in this month's Participation Report and the associated one-month projections from last month's Report.

FARM Actual vs Projected Summary: IBNR and APV Amounts (\$ thousands)

Table 02a		actuarial present value adjustments						
	IBNR		Discount Amount		Provisions for Adverse		IBNR + actuarial present	
					Deviations		value adjustments	
Accident	Actual	Actual less	Actual	Actual less	Actual	Actual less	Actual	Actual less
Year	Actual	Projected	Actual	Projected	Actual	Projected	Actual	Projected
Prior	14,311	473	(4,582)	105	12,343	(170)	22,072	408
2017	12,934	576	(1,365)	(10)	4,754	35	16,323	601
2018	26,428	2,627	(2,722)	(55)	8,357	152	32,063	2,724
2019	56,210	1,638	(4,507)	(10)	13,377	36	65,080	1,664
TOTAL	109,883	5,314	(13,176)	30	38,831	53	135,538	5,397

The IBNR provision is \$5.3 million higher than projected from last month, counterbalancing the recorded claims activity and earned premium variance impacts indicated in section 2.1.

Exhibit G shows the accident year IBNR amount change from last month to this month broken down into:

- (i) the change projected last month;
- (ii) the additional change due to variances in earned premium (because we apply a loss ratio to earned premium in determining ultimate level) and/or recorded claims (as IBNR is calculated as ultimate less recorded) differences; and
- (iii) the additional change due to valuation implementation impacts (as applicable)

The variances associated with (ii) above are discussed in sections 2.1.a and 2.1.b.

In addition to the provisions for indemnity amounts, provisions are established for certain adjustments to Servicing Carrier claims fees and for certain reimbursable legal and professional claims adjudication fees, which we refer to as "allowed claims expenses" (see footnote 2 on page 5).

The table at the top of the next page summarizes the variances in these "Retro Claims Provisions" included in this month's Participation Report and the one-month projections from last month's Report. The variances generally reflect earned premium variances by jurisdiction and variances in payments for allowed claims expenses relative to projections.

FARM Actual vs. Projected Summary: "Retro Claims Provision" and APV Amounts (\$ thousands)

Table 02b		actua	arial present v							
	Retro Claims Provision		Datus Claims Bussisian				Provisions for Adverse		Retro + actuarial present	
			Discount Amount		Deviations		value adjustments			
Accident	Actual	Actual less	Actual	Actual less	A ctual	Actual less	Actual	Actual less		
Year	Actual	Projected	Actual	Projected	Actual	Projected	Actual	Projected		
Prior	18,596	(90)	(843)	9	2,437	(51)	20,190	(132)		
2017	2,275	63	(103)	(3)	663	23	2,835	83		
2018	4,606	84	(165)	(4)	1,307	32	5,748	112		
2019	2,572	(20)	(248)	-	1,677	(75)	4,001	(95)		
TOTAL	28,049	37	(1,359)	2	6,084	(71)	32,774	(32)		

The table below summarizes the variances in the provisions for the deferred policy acquisition cost amounts (the FARM overall remains in a deferred asset position) included in this month's Participation Report and the one-month projections from last month's Report. The variances are mainly driven by the unearned premium balance variance (at the jurisdiction level).

FARM Actual vs. Projected Summary: Premium Deficiency / (DPAC) Amounts (\$ thousands)

Table 03	Premium Deficiency / (Deferred Policy Acquisition Costs)		actuarial present value adjustments		Premium Deficiency / (DPAC) including actuarial present value adjustments	
	Actual	Actual less	Actual	Actual less	Actual	Actual less
	Actual	Projected	Actual	Projected	Actual	Projected
balance:	(13,535)	73	109	(7)	(13,426)	66
balance as % unearned premium:	(7.7%)	-	0.1%	-	(7.6%)	-

actual unearned premium: 176,406 less projected: (225)

3 Ultimate Loss Ratio Matching Method

An "ultimate loss ratio matching" method continues to be applied to the current month and two projected months shown in the Participation Reports, with IBNR determined by accident year (for accident years 1994 and on) as follows:

- (a) Earned premium to date
- (b) Ultimate loss¹¹ ratio per latest valuation
- (c) Estimated ultimate incurred = (a) x (b)
- (d) Recorded indemnity to date
- (e) IBNR = (c) (d)

IBNR for accident years 1993 and earlier is kept at \$0. For the two projected months, IBNR was determined in a similar way, incorporating the two-month projections of earned premiums and

¹⁰"Retro Claims Provision" here refers to the provision for unpaid claims fees & allowed claims expense for Service Carriers in managing and adjudicating claims on behalf of the Facility Association. Non-\$0 actuarial present value adjustments for these provisions were added for the first time with the October 2016 Participation Report. Please see the associated Actuarial Highlights for more information.

¹¹"Loss" here refers to indemnity only unless otherwise noted.

recorded indemnity. Prior to actuarial present value adjustments, any expected emergence of recorded claims amounts pertaining to prior accident years ¹² during the two-month projection period is assumed to be offset by changes in IBNR. Furthermore, the implied ultimate loss ratios pertaining to each accident year (including the current accident year) are the same in the current month as in the two projected months.

A similar approach is used in determining the part of the Retro Claims Provisions in relation to the allowed claims expenses. That is, an ultimate ratio is determined akin to the loss ratio, and the provision is set following a process as outlined above.

4 Calendar Year-to-Date Results

The table below summarizes the calendar year-to-date results for indemnity as well as Servicing Carrier claims fees & allowed claims expenses. In determining the ratios to earned premium, the calendar year-to-date earned premium has been used, which includes earned premium associated with the current accident year but also earned premium adjustments related to prior accident years.

FARM Calendar Year-to-Date Indemnity, Claims Fees & Allowed Claims Expense Summary (\$ thousands)

Table 04	YTD Nominal Values		YTD actuarial present value adjustment		YTD Total		Change from Prior Month YTD	
	Amount	% EP	Amount	% EP	Amount	% EP	Amount	LR pts
PAYs	14,947	5.1%	1,525	0.5%	16,472	5.6%	(631)	(1.0%)
CAY	192,998	66.2%	10,299	3.5%	203,297	69.7%	21,356	(0.1%)
TOTAL	207,945	71.3%	11,824	4.1%	219,769	75.3%	20,725	(1.0%)

("% EP" based on 2019 calendar year-to-date earned premium; ratios may not total due to rounding)

In general, prior accident years (PAYs) changes from last month are due to the release of the actuarial present value adjustments with claims payments, except when valuations are implemented. The loss ratio change year-to-date in Table 04 reflects not only changes in the prior accident year levels, but also the increase in the calendar year-to-date earned premium with an additional month's earned premium.

For the current accident year, changes in the year-to-date total reflect the additional month's exposure and regular changes to actuarial present value adjustments as the year ages.

5 Current Participation Report – Additional Exhibits

Section 6 provides exhibits pertaining to the actuarial provisions reflected in the current month's Participation Report.

IBNR (including actuarial present value adjustments) presented in section 6, Exhibit A, were derived on a discounted basis, and therefore reflect the time value of money and includes explicit provisions for adverse deviations in accordance with accepted actuarial practice in Canada.

IBNR presented in section 6, Exhibit B, does NOT include any actuarial present value adjustments. The "Total IBNR" from this exhibit is shown in the Participation Report as "Undiscounted IBNR".

As discussed in section 3, IBNR in the current month's Participation Report was derived as the

¹²Prior accident years and the current accident year are defined relative to the calendar year associated with the projection period.

difference between the estimated ultimate for the claims amount (i.e. earned premium x ultimate loss ratio) and the associated current recorded amounts (life-to-date payments plus current case reserves).

6 EXHIBITS

The exhibits listed below are provided on the pages that follow:

EXHIBIT A IBNR – for Member Sharing (<u>in</u>cludes Actuarial Present Value Adjustments)
